

## **How Package Nexus Smart Lockers Made My Life Easier**

### **The World's Most Advanced Smart Lockers**

There is nothing worse than ordering something online, especially for next day delivery and then not being able to receive it. These days I shop online a lot more, but due to my busy lifestyle of going to work, picking up the kids, running errands etc. I'm not always home to sign for the delivery. It was a big issue until Nexus Smart package lockers for apartments were installed in my block. They used patented technology to solve this problem. I was excited to try them, the idea of a secure package delivery system really appealed to my needs.

### **My Parcels Used to Get Stolen**

My pervious apartment was even worse, we didn't have smart lockers, so I often had my parcels stolen, I used to complain to my apartment manager all the time but there was nothing he could do. I would have to arrange staying in when I ordered something, and it was impossible to arrange my schedule around that.

### **How It Works**

Smart lockers use a simple contactless process – the delivery agent logs into to Nexus Smart parcel locker to deliver the package. They find my name on the list from the database and then chose the locker size they need. An empty locker opens, and they load the package into it and then close the locker door. It's simple! I receive and email or text to let me know a secret pickup-code so I can go collect it when it's convenient for me. I just enter this code or scan a barcode, open the locker, and collect my package. All the information I need is on my phone.

### **Unique Features**

I order so much online now I don't always know what I'm expecting to arrive on which day, so sometimes when I check my locker on the way to work it's a much bigger parcel then I thought I would be, and I don't want to carry it with me all day until I get back home. Parcel Nexus smart lockers have a feature that I hadn't seen before. I can use my pickup code to open my locker, look at my package and then put it back and close the door, if I choose to pick it up later. I receive another text to confirm my successful pick up. I don't feel the pressure of having to take it right away.

### **I Trust It**

Whether I have a package delivery from UPS, FedEx, Amazon etc. It's a weight off my shoulders to know it will be taken care off when I'm not available to physically receive the delivery myself and its safe and secure.

### **Advanced, Safe, Contactless Technology**

They are high tech nothing like my old gym lockers used to be! Nexus Package Smart lockers use state of the art patented technology. Unlike other lockers I've used it's reliable and never breaks down either. I've started seeing them in supermarkets, pharmacies, and they even have refrigerated and freezer smart lockers, which is great for my mother who is diabetic and needs to collect her regular insulin shots. Her restricted mobility makes it had for her to collect her medicine on time, this makes it flexible, and I can get it pick for her instead when I have time, but there's no rush if its refrigerated. Another problem solved!

### **Easy to Set up**

I self registered on their website [www.packagenexus.com](http://www.packagenexus.com) and followed the instructions to get set up. It's secure, and easy to use I've never had any problems. I can get to my parcel 24/7 it's so convenient. You should check if you have access to smart package lockers for apartments so see how it make your life easier too!
